Original estimate:	Not Specified		

Description

The Register button remains active even though the form has not been filled, allowing users to click the button and receive multiple error messages at once.

Steps to Reproduce:

- 1. Open the Registration page
- 2. Don't fill in any fields
- 3. Observe that the Register button remains active (not disabled)
- 4. Click the Register button
- 5. Observe that many error messages appear simultaneously

Expected Result:

- Register button should be disabled until all required fields are filled
- Or validation is done progressively (field by field)
- Error messages appear one by one according to the filling flow

Actual Result:

Register button is active from the start, and when clicked multiple errors appear simultaneously confusing the user.

Impact:

Poor user experience, users are overwhelmed with multiple error messages appearing at once.
