Description

When users select filters on the category page and then refresh the page, all selected filters are lost and return to default.

Steps to Reproduce:

- 1. Open the Categories/Products page
- 2. Select several filters (e.g., price range, brand, category)
- 3. Observe the filtered results
- 4. Refresh the page (press F5 or reload button)
- 5. Observe that all filters return to default state

Expected Result:

- Filter state is saved in URL parameters or browser storage
- After refresh, selected filters remain active
- Users don't need to reselect filters

Actual Result:

All filters are lost after page refresh, users must reselect from the beginning.

Impact:

Poor user experience, users must reselect filters every time they refresh the page.
